WEATHER

Temperatures for the week were well below normals across the State averaging from six to ten degrees below normals. Precipitation was received over much of the State with averages in the west ranging from a fourth of an inch to six-tenths of an inch, while averages over the remainder of the State ranged from two to three inches.

GENERAL

Fall harvest and tillage operations were slowed or halted the later part of last week due to winter-like weather conditions, according to the Nebraska Agricultural Statistics Service. By the later part of last week, freezing rain and snow across the State had affected most producers with unfinished fieldwork. Other fieldwork activities included applying fertilizer, fencing stalks, and working cattle.

CROPS (Cont.)

Corn grain harvest was 93% complete, slightly behind 94% last year and ahead of 87% average. Harvest activities were most advanced in south central counties with 98% combined as of Sunday.

Sorghum grain harvest was 88% complete, behind 100% last year and the average of 96%. Producers in the southeast counties had the largest number of fields remaining to be harvested. Heavy rains on Saturday will further delay harvest completion.

Winter wheat condition rated 3% poor, 28% fair, 63% good, and 6% excellent. Rain and snow received last week should benefit the crop prior to entering dormancy.

LIVESTOCK, PASTURE & RANGE

Producer activities included weaning calves and moving cows to stalks for gleaning. Some calves were being moved to feedlots.
